

A reference library for new materials

Date : April 29, 2012

I just wanted to bring your attention to the website of this company

(<http://www.materialconnexion.com>), which may be of interest to some of you.

When I first stumbled upon it, it took me a good while to understand what this was all about. After some time, I realized what the company offers is consultancy about materials. The interesting thing is that they have created a huge database where you can browse through all the new materials that are being created. The best thing is that they also have a physical library where you can browse through the "physical references" of all those materials.

Hope you enjoy it!

PS: You can also sign up for their monthly newsletter, which sends you update with new materials.
